

Your complete water management resource for innovative Pumping Stations and Water Features.

SELF-CLEANING FILTER

FILTRATION

FEATURES & BENEFITS

SELF-CLEANING FILTERS: To maintain an effective irrigation system, it is vital that the water supply be free of particles that can clog valves, nozzles, and drip zone filter units. inCon-trol's line of self-cleaning filters insure that these particles don't enter the system and that the filter doesn't compromise the irrigation system's performance. Their maintenance friendly design reduces downtime, allowing the irrigation system to run at full capacity.

- Flows From 20 – 1000 GMP
- Screen Sizes From 10 – 1500 Microns
- 316 Stainless Steel Screen
- Hydraulic or Electrically Controlled
- Short Flush Cycle
- Low Pressure Loss Design
- Heated Aluminum Enclosure
- Optional Integration w/ Pump Systems
