

Your complete water management resource for innovative Pumping Stations and Water Features.

FEATURES & BENEFITS

SUBMARINE SUCTION SERIES: The innovative design of the patented Submarine Suction allows the installation of a suction line in an existing body of water. The Submarine Suction can be buoyant, allowing for proper placement of the component in a body of water. Once the unit is located in the desired location, the Submarine Suction is designed to descend to a desired depth. The design ingenuity of the Submarine Suction allows the component to ascend and descend utilizing a patented ballast system, which allows for easy installation and maintenance.

Standard Features

- Water resistant ballast system
- In-take assembly – suction screen w/ foot valve
- Stainless steel hardware
- Flanged HDPE discharge heavy duty pipe
- Patented product
- Aluminum framing and bracing
- Secure, flanged connections
